

Drawing Index Notes

This Index is subject to continual update as more data becomes available. It has been generated from drawings actually held by Timesegment Limited and others. There are some 2800 drawings listed. Reading produced some 13000 drawings many with multiple pages so this is only the tip of the iceberg. The drawing library from which this was generated consists of some 2100 GWR/BR(WR) drawings. The extra drawing information came from sheet 2 of multiple page drawings, and notes on other drawings saying supercedes drawing XYZ.

The standard format for Reading Drawings, was an initial letter specifying the type of drawing, M – Mechanical ; T – Telegraph etc, followed by a letter indicating imperial paper size. A – Foolscap etc. up to G as the largest size used. Note the sizes did not comply entirely with the standard paper sizes then available. The prefix was then followed by a 4/5 figure number (some of the unused lower numbers were used by BR in its latter days) If the drawing spread over more than one page then this was indicated by a number after a '/'. The drawing issue was indicated by a letter. The initial issue had no letter, so issue 2 was lettered A. So as an example a mechanical drawing drawn on size A paper part of a series of 200 pages using the next available number at the time of drawing and at issue 4 would be numbered in the format MA9000/200C. There are exceptions and oddities. The index is in the form of a spread sheet and to aid sorting and searching the elements of the drawing are in separate columns.
